WSDOT Test Method T 127

Preparation of Leachate Sample for Testing Toxicity of HECP Effluents

1. Scope

This test method outlines the procedure for collecting leachate from a HECP sample.

2. References

2.1 EPA-821-R-02-012 Methods for Measuring Acute Toxicity of Effluents

3. Preparation of the HECP Sample

- 3.1 Lay cheesecloth over clean topsoil
- 3.2 Apply the HECP to the cheesecloth at the following coverage:
 - 3.2.1 HECP Long-Term or Moderate-Term Mulch 3,500 lbs per acre in two lifts with no more than 2000# per acre in any one lift.
 - 3.2.2 HECP Short-Term Mulch 2000# per acre minimum, or manufacturer's recommended rate may be used.
- 3.3 Allow material to cure for 48 hours
- 3.4 Pull cheesecloth up with mat of HECP, brush off any soil
- 3.5 Cut HECP into squares and provide 1.02 pounds of HECP to the laboratory.

4. Preparation of the Leachate (done by the laboratory)

- 4.1 Allow hydromulch product to soak in water for one hour
- 4.2 Remove hydromulch sheet from water
- 4.3 Filter water through a 60 micron filter water may be pre-filtered through a 35 mesh and then a 120 mesh before using the 230 mesh/63 micron filter.

Note: Leachate not immediately used for testing should be stored at 4° C in the dark until use.

4.4 Test leachate according to EPA-821-R-02-012 Methods for Measuring Acute Toxicity of Effluents.
